ABSTRACT

This report presents the performance for school district categories and for individual school districts on the fifth grade Texas Educational Assessment of Minimum Skills (TEAMS) test. The Grade 5 criterion-referenced test contained three sections: mathematics, reading, and writing. Testing was conducted during February 1986. This report is in two sections. Section I contains performance information grouped by categories within 17 characteristics of school districts, such as size and wealth. Section II contains student performance for each school district in the state. Districts are arranged in alphabetical order. Student performance results are presented as the percentages of students in each reporting group (district and category of districts) who passed each section of the test and those who passed all tests taken. In addition, predicted national percentile ranks are displayed along with the numbers of students requiring remediation for each district and district group. The predicted national percentiles were constructed in a 1985 pilot study which compared the performance of Texas fifth graders on the TEAMS tests with the performance of students in other parts of the nation on the Metropolitan Achievement Test, Sixth Edition. Introduction

This report presents the performance for school district categories and for individual school districts on the fifth grade Texas Educational Assessment of Minimum Skills (TEAMS) test. The Grade 5 criterion-referenced test contained three sections, mathematics, reading, and writing. Testing was conducted during the period of February 10 through February 21, 1986.

The report is in two sections. Section I contains performance information grouped by categories within characteristics of school districts such as size, wealth, etc. Section II contains student performance for each school district in the state. Districts are arranged in alphabetical order.

Student performance results are presented as the percentages of students in each reporting group (district and category of districts) who passed each section of the test and those who passed all tests taken. In addition, predicted national percentile ranks are displayed along with the numbers of students requiring remediation for each district and district group.

Predicted National Percentile Ranks

A pilot study for comparing the performance of Texas students in Grade 5 on the TEAMS tests with the performance of students in other parts of the nation on a national norm referenced test was conducted in February, 1985. The Metropolitan Achievement Test, 6th Edition was used. As a result of this study, equating tables were constructed to establish predicted national percentiles for the average scores of students in particular reporting groups. When the average score is used for making the prediction, the entire range of scores from a group contribute to the predicted national percentile ranking. As a result, two different districts that have the same percentages of students passing the mathematics, reading, or writing sections of the TEAMS tests are likely to have different ranges of scores and different predicted national percentile rankings. This variation is expected to occur whenever such comparisons are made.

A predicted national percentile rank represents the percentile rank for the average score of students in a

particular reporting group. For example, a district level predicted national percentile rank of 63 would represent the percentile rank for the average score of the students in the district. The 63rd percentile would indicate a score that was higher than the scores obtained on the same test by 63 percent of the students in the national norming group. The predicted national percentiles for Grade 5 students in the state of Texas are: mathematics - 62nd percentile; reading - 53rd percentile; and writing - 63rd percentile.

SECTION I

Performance for Various School District Categories

For analysis purposes, all school districts have been grouped by such characteristics as size and wealth and further categorized depending upon the degree to which the particular characteristic exists. The major groupings and the categories which identify school districts within each grouping are as follows:

CHARACTERISTICS	CATEGORIES
Size - Average daily attendance	Nine ADA groupings
Type - Major urban to rural	Seven types
Wealth - Taxable value/ADA	Ten levels
Wealth - Taxable value/ADA	Two levels
Effective tax effort	Four levels
Effective tax effort	Two levels
Percentages of black students	Six groupings
Percentages of Hispanic students	Six groupings
Percentages of minority students	Six groupings
Education service center regions	Twenty regions
State Property Tax Board - Highest Category	Four levels
Price differential index (PDI) level	Five groupings
Percentages of students participating in compensatory education	Six groupings
Percentages of students passing all sections of Grade 9 TABS	Five groupings
Operating cost per student	Five groupings
Refined average daily attendance change from 1983-84 to 1984-85	Five groupings
Density: Students per square mile	Four groupings

For convenient reference, summary information for the state is shown at the bottom of each column on each page.

SECTION II

Performance by School District

Based on the results reported in Section I of this report, it is evident that student performance varies substantially when aggregated by different categories of students and school districts. Therefore, it is difficult to compare relative effectiveness using only the information presented in this section. There are many factors that influence student performance such as school district size, wealth, socio-economic status, and mobility of students as demonstrated in Section I. Accurate comparisons of districts are based upon a complete profile of school district characteristics.

Reporting Format

The district level performance information presented in Section II of this report is arranged in alphabetical order by district name. District level performance has been suppressed for all districts in which fewer than five students were tested in a given subject area. The suppression is noted by an asterisk (*) in place of the data. This has been done to maintain confidentiality of individual student performance information as required by Section 21.556 of the Texas Education Code.

There are some factors that should be taken into consideration when analyzing and comparing district test performance. First the format adopted for this volume will not accommodate the display of demographic characteristics, the numbers of students tested, and educational program information that can have significant effect on the percentages of students demonstrating mastery of the tests. Also, in small districts, the performance of a relatively small number of students can result in wide variations in the percentages of students attaining mastery of an objective or a total test.

Student Characteristics

During the six years that student assessment has been conducted on a statewide basis in Texas, certain patterns of student performance have been evident and consistent from year to year. For example, participants in some school programs (Chapter I regular and migrant, free or reduced

price meal, bilingual education, English as a second language, and special education) have performed less well in all grades and subjects tested than students who were non-participants in such programs. Also, black and Hispanic students have performed less well than white students in all subjects and grades. Educational research has shown that these observations are not peculiar to Texas students but exist in varying degrees in student populations nationwide. Since many school districts have disproportionate numbers of students in special programs and/or have ethnic percentages that differ significantly from the overall ethnic composition of the state, comparisons of school districts that do not take these factors into consideration can lead to conclusions that are unwarranted.

Student Mobility

Some Texas school administrators have reported student movement into and out of their school districts at rates that have been as high as 30 percent during a school year. This means that at the end of the school year, only 70 of each 100 students were the same as those who entered the district's schools the previous fall. Fast-growing urban centers are more likely to experience high student mobility than smaller rural districts. However, smaller districts that are adjacent to or near fast-growing urban areas may have relatively small changes in the numbers of students enrolled but relatively large percentage changes. In any event, high student mobility exists for many school districts and, as a result, the percentages of students mastering the tests may bear little relationship to the effectiveness of the district's education programs.
